

Welcome to Tokiphy Studio

"The All-in one web3 Fulfillment Creator Solution"

Tokiphy revolutionizes the way blockchain wallets and tokens are authenticated for identity and token ownership. Rather than relying on a multitude of disparate, non-interoperable solutions with awkward user experiences, Tokiphy simplifies wallet access and token validation through one seamless process: an initial setup that binds a smartcard to your wallet.

Instantly authenticate a person's card, wallet identity and token ownership with one swift scan - no need for direct access to the blockchain wallet.

1. Introduction to the Tokiphy Ecosystem

Tokiphy is a technology that streamlines the verification process for blockchain wallet identity and token ownership. This is done through the use of a physical Tokiphy Card, a Tokiphy Chip, and a Tokiphy Reader device.

The Tokiphy Ecosystem is designed to bridge the gap between the physical and digital realms. With the rise of digital assets, especially NFTs, there's a growing need for a seamless, secure, and user-friendly platform to manage, validate, and transact these assets. The Tokiphy Ecosystem provides a variety of products and services.

We offer a range of products to enable user validation and authentication, including Tokiphy Cards and Tokiphy Chips. For automated access control, we provide door and gate-lock motor solutions, as well as handheld and industrial reader devices for validation. We also offer OEM IoT verification modules that can be embedded into existing hardware systems, such as vending machines, production machinery, and medical and institutional equipment.

Users

A "User" refers to any individual or physical entity utilizing the Tokiphy Card or the Tokiphy Chip as a means of verifying their identity and confirming their ownership of tokens. The ownership of tokens is determined by the possession and interaction with NFT tokens in a blockchain wallet, while identity is established based on the ownership of the blockchain wallet. NFT token validation can enable additional token-gated services, benefits, and product experiences.

Creators

The term "Creators" refers to a wide range of individuals and entities, including NFT artists and brands, design studios, agencies, ticket providers, digital ID authorities, certificate issuers, schools, musicians, blockchain and web3 projects, and other token-gated service providers.

Validators

"Validators" are service providers such as event organizers, authorities, institutions, companies, or other entities in industries like sport, music, fashion, lifestyle, art and hospitality who utilize the Tokiphy Ecosystem.

Blockchain compatibility

We are currently in the public beta phase and can verify wallet interaction and validation on Ethereum, Polygon, and Binance Smart Chain (BSC). Additionally, we are currently working on integrating more blockchains into the Tokiphy Ecosystem soon.

2. Products & Services

2.1 Products

The Tokiphy Card, the Tokiphy Chip and the Tokiphy Reader are physical hardware devices.

Tokiphy Cards

The Tokiphy Card is a customizable physical smart card that features the Tokiphy brand, logo, and a hologram imprint on the backside. It also includes a serial number, a QR code, a security label, and other edition-specific details.

The QR code on the card has the public address of an EVM-compatible blockchain wallet assigned to it. This QR code can be scanned from a wallet such as metamask and may serve as a destination address if you wish to transfer NFT tokens to the card's default wallet.

To make the process of onboarding to blockchain easier, Tokiphy Cards come with a pre-assigned Ethereum Virtual Machine (EVM) compatible wallet address that can actually be used on Ethereum, Polygon and BSC. Creators have the option to "load" or drop tokens as well as NFTs in advance and distribute these cards among their users. Once users receive a card (e.g., ticket or collection of NFTs), it's possible for them to claim it and gain access and control over its default wallet, including encrypted key export. Additionally, users are able to transfer NFT tokens to personal wallets .

The card code printed below the security label is necessary for both user registration and card claim functions.

The default wallet is not assigned to any user at the beginning. The first user who registers their card code on the Tokiphy Platform will have access to the wallet. This is when the Tokiphy Wallet functionality will become available.

Tokiphy Cards are not a type of hardware wallet and do not store any private keys or personal information related to blockchain wallets.

Tokiphy Cards serve various purposes such as being custom branded gift-cards, collectible cards, membership cards, identification cards, authentication cards, access control cards, or general key cards.

Can be scanned through NFC Technology.

The Tokiphy Card can be used with Tokiphy Reader hardware to instantly confirm a user's public blockchain wallet address and verify their ownership of tokens. This includes both the default wallet and any assigned custom wallets. The Tokiphy Cards utilize NFC technology within a range of 80 centimeters for scanning. Tokiphy cards are being distributed either directly under the Tokiphy brand or through third-party brands, but the back side of the card always has the Tokiphy brand printed on it.

Custom Brands

Tokiphy Cards can be used by brands and creators to provide token-gated services. They do this by checking token ownership on designated user wallets. Additionally, brands and creators can add NFTs or digital blockchain certificates to Tokiphy Cards ahead of time and distribute them to their customers. Customers can then claim the corresponding NFTs or certificates using the Tokiphy Wallet solution at a later time.

The experience allows users to claim their drops using only the Tokiphy Card, providing a physical NFT mint experience. Users do not require blockchain technology experience or a wallet to participate.

Tokiphy Cards are the perfect companion for any occasion, be it as a gift-card, membership card, access control or even keycards associated with your favorite brand. With their revolutionary and secure token authentication system that promises to provide you with an unprecedented level of speed and safety, Tokiphy allows brands, creators and businesses alike to create amazing real-life experiences unlike anything else available on the market today!

Tokiphy Chips

The Tokiphy Chip is a smaller version of the Tokiphy Card meant for embedding or wearing. Although smaller, it has the same features and capabilities as the Tokiphy Card. Because of its smaller size and antenna, it uses NFC proximity technology, with a scanning range of up to 10 centimeters. The Tokiphy Chip is great for

verifying the authenticity of physical products in relation to their digital NFT twin or originality certificate.

By working with established brands and offering complete customization of our Tokiphy chip, we help them generate additional revenue through a new product category that offers generous margins while giving customers an all-new brand experience.

The authentication of brand-related digital collectibles, utilities and benefits using our embedded chip linked to the client's blockchain wallet opens up further usage possibilities and new in-house shopping experiences.

SECURITY

The Tokiphy Hardware offers encrypted data storage, encrypted data transfer, and signature validation features. These features can be accessed using the Tokiphy identification and authentication system. All data stored in Tokiphy Cards and Tokiphy Chips are encrypted with AES256, ensuring that they cannot be read, copied, or tampered with by third-party products. The secure element we use for key generation and storage is CC EAL5+ certified.

Made in Germany

Our Tokiphy Cards and other Tokiphy products are made in Germany under LarsLabs GmbH's supervision. The manufacturing process adheres to the highest standards of quality and security. The EMS partner production lines have ISO 9001 and ISO 14001 certifications. Additionally, we ensure compliance with ISO 27001. At LarsLabs in Germany, we also handle in-house engineering for both hardware and software.

Tokiphy Reader, Token-Gating and Validators

The Tokiphy Validator is a service that helps identify the owner of a blockchain wallet and confirms their token ownership. To use it, you will need two hardware components:

Tokiphy Card or Chip and a Tokiphy Reader device.

The Tokiphy Card is connected to a blockchain wallet belonging to the user. By using the Tokiphy Reader hardware to scan the card, we are able to verify the user's token ownership and identify their wallet in a single step.

Validators have the ability to choose a particular blockchain token, which is referred to as the NFT minting contract address, on Ethereum, Polygon (Matic) or the Binance Smart Chain (BSC). By adjusting settings such as token id, token quantities, native token balances, name, symbol, metadata properties, and traits, an even more specific selection can be made. The validator can fully customize their validation criteria for blockchain tokens through programming.

Once you complete the initial setup process, you can scan your user card with a Tokiphy Reader to receive a response of either "VERIFIED" or "UNVERIFIED".

The entire procedure is typically completed in less than two seconds. In addition REST API services facilitate API integration into third-party applications and apps.

Token-gating is when you use a token or NFT to unlock or enable something. This can be anything from digital content to physical goods.

Brands can offer exclusive merchandise to their fans that also doubles as a ticket to the event. By embedding the Tokiphy Chip in t-shirts and other items of clothing, brands can give fans access to digital content before the event. This allows sponsors to get more exposure for their brand while also delivering an easy and convenient experience for music lovers.

Fashion brands are always trying to stay ahead of the curve, and one way they're doing that is by experimenting with limited apparel collections. Tokiphy offers NFC tags that offer even more benefits, like validating digital twins linked to the metaverse, pre-installed NFTs linked to holders and physical items. This could be your ticket into IRL events or a meet and greet with artists!

Tokiphy is an excellent way for web3 communities to easily organize fun IRL events that come with personalized tickets catered to the attendees. Tokiphy helps to bring people from different communities together and create new ecosystems. We validate digital tokens from different NFT projects so that we can unite project lovers from the art, fashion, and music sectors.

Token-gating can either be simple, such as owning x to unlock y, or it can more complex and based on different variables:

- What combination of NFTs a user owns
- Which specific traits those NFTs have
- How long the user has owned them

When you own a digital blockchain wallet, it will be similar to carrying around your pocket wallet today. In the future, digital tokens will take the place of cash or other

assets for payments and accessing services and benefits.

Tokiphy is the solution you need to verify identity and ownership quickly, easily and safely.

Token-gated commerce is predicted to grow rapidly because NFTs can connect customer journeys through platforms. This means that the platform a customer uses does not matter - what matters most is that the brand creates an engaging and easy experience. For Shopify merchants, this could look like setting up a token gate on their online store and providing customers with a step-by-step guide on how to collect tickets using Tokiphy's utility services.

With digital identities in metaverses, customer experiences are going from 2D to 3D and physical to virtual.

NFTs are shrouded in a sense of scarcity, provenance, community, and knowledge. We can see how digital fashion designers will utilize Tokiphy to create an entirely different ecosystem that prioritizes traceability. This would allow brands to have control over the secondary market while also providing customers with insight into which artist wore their dress at a specific event.

We have full confidence that Phygitals will be the most crucial role in the near future.

2.2 Services

The Tokiphy Platform, Tokiphy Wallet, Tokiphy Creator, Tokiphy Studio, and Tokiphy Validator are all digital services. These services are meant for individuals who use either the Tokiphy Reader Hardware or the services provided in the Tokiphy Portal, specifically content creators and validators. The Tokiphy Wallet is also available to end customers.

Tokiphy Platform

The Tokiphy Platform provides end users with convenient access and management of services related to their Tokiphy Card. This includes features such as default wallet access, wallet export, and token transfer. Additionally, end users have the ability to connect existing wallets to their Tokiphy Card, enabling a seamless and enhanced multi-pass token-gating experience.

All Tokiphy Cards come with a complementary three-month all-inclusive wallet service, time enough to explore the Tokiphy Ecosystem and having full control and access over their digital NFTs.

Tokiphy Studio

The Tokiphy Studio Platform empowers content creators, brands, artists, and web3 projects to effortlessly create, mint, and distribute various forms of digital content. This includes NFT artwork and functional digital tokens such as tickets, certificates, digital twins, membership tokens, and loyalty tokens.

Tokiphy Validator

Tokiphy provides an innovative validation solution that simplifies token-access and token-enabled services, ensuring a seamless customer journey experience and completing the full cycle of digital identity and token ownership validation.

3. Tokiphy Studio

3.1 Introduction

Tokiphy Studio is an innovative platform that empowers creators, brands, and web3 projects to:

- Upload their digital designs and artwork
- Generate unique designs and artwork using state-of-the-art AI tools
- Fine-tune artwork to customize the Tokiphy Card Print
- Create their own NFTs and mint token contracts
- Mint both fungible and non-fungible tokens on various blockchains
- Seamlessly transfer or distribute tokens directly to Tokiphy's pre-assigned card wallets

With Tokiphy Studio, artists and projects can unleash their creativity, leverage cutting-edge technology, and achieve their vision in the digital realm. Tokiphy Studio offers a range of service tiers, each tailored to meet the diverse needs of our customers. With the ability to scale on demand, we provide flexibility without compromising on the quality of services enabled.

Start crafting and sharing your digital NFT artwork without requiring extensive expertise in web3 and blockchain technology.

You don't even need a blockchain wallet or have to buy native tokens to start minting. With Tokiphy Studio, we handle everything in advance to make it easier for you to begin your creative web3 journey.

Use case: Tokiphy Gift-Cards

To provide a comprehensive overview of the Tokiphy Ecosystem's life cycle, let's delve into a real use-case and highlight one of our products: the Tokiphy Gift-Card.

The Tokiphy Gift-Card is essentially a Tokiphy Card adorned with bespoke creative artwork, serving as a unique branding element. In addition, we have developed an online shop that can be found at shop.tokiphy.com. Here, customers have the opportunity to purchase pre-generated artwork gift-cards or even craft their own custom designs.

We provide a wide range of stunning designs for various occasions, giving customers the opportunity to personalize their own gift cards by uploading their artwork. Additionally, customers can mint an NFT and directly transfer it to the designated wallet on the Tokiphy Card. This seamless process ensures a unique and memorable gifting experience.

The lucky recipient can enjoy the delightful surprise by registering and claiming ownership of the wallet containing the digital NFT twin artwork. They will gain exclusive access to its captivating allure.

Additionally, we provide the sender with the public wallet address, enabling them to add any additional NFT artwork to the gift card.

The Tokiphy Solution offers a seamless way for private customers, creators, artists, and web3 projects to effortlessly distribute digital NFT artwork in real life through our physical card solution. No extensive knowledge of web3 or blockchain technology is required, eliminating the need for a dedicated blockchain wallet or third-party minting solutions. Experience the convenience and simplicity of Tokiphy!

"A comprehensive fulfillment solution that covers all your needs in one place"

Imagine this: the newly dropped NFT serves as a digital ticket, a unique certificate granting access to exclusive services and products. From token-gated experiences to event entry and additional utilities tied to NFT ownership, our handheld reader device effortlessly validates identity and token possession within a mere two seconds. With just one scan, you can unveil a world of possibilities for building and offering exceptional services to your esteemed customers. Isn't that simply astounding?

Leverage the power of the Tokiphy Ecosystem to bring your web3 project to life. From a basic digital ticketing solution to a distributed access control system, or

even a fully scalable membership or loyalty customer experience solution - the possibilities are endless. Explore the potential and unleash your creativity with Tokiphy!

Give it a try on your own today!

Experience the Tokiphy Difference with a personalized Custom Card from our shop. Upload your artwork, mint NFTs, and send it to yourself or someone special.

[Create your own breathtaking Tokiphy Card today](#)

3.2 Studio Services

As mentioned earlier, Tokiphy Studio offers a range of service tiers to meet the needs of artists, brands, creators, and web3 projects. Starting from as low as € 16,- per month, there are no recurring subscriptions required. For more information, please refer to the pricing details in section x.x.

To better understand the various Tokiphy Studio Tiers, let's first explore the dedicated services of tier packages.

3.2.1 Tokiphy Platform Service

The Tokiphy Platform, available at Tokiphy.io, offers free access to all users who possess either Tokiphy Cards or Tokiphy Chips.

3.2.2 Tokiphy Wallet Service

Tokiphy Wallet is a technology solution to simplify user wallet access. Each Tokiphy Card comes with a default Ethereum, Polygon (Matic) and Binance Smart Chain (BSC) wallet that is assigned to the card during manufacturing and initialization.

The service offers access to Tokiphy Wallet Service and full access to all of its functionalities. It also includes an NFT viewer and NFT blockchain transaction, with the option to export the private key.

The Tokiphy Wallet service enables cardholders to conveniently access and manage their default Tokiphy wallet. Each Tokiphy Card includes a complimentary

three-month freemium period for the Tokiphy Wallet services. Furthermore, users have the option to extend their wallet service by purchasing an additional package.

3.2.3 Tokiphy Creator Service

The Tokiphy Creator service is an integral component of Tokiphy Studio, providing a range of tools and sub-services for designing and creating artwork.

3.2.4 Tokiphy Artwork Upload Service

The Tokiphy Artwork Upload service is a component of Tokiphy Creator and is also included in the Tokiphy gift-card product. It enables customers and creators to upload their digital artwork to our platform for further processing. The uploaded artwork can be used for direct printing on Tokiphy cards or as metadata for NFT minting. This service includes credits that can be used for different sub-services. Additionally, each upload credit comes with five try credits in case your content is flagged by our GORE detection tools.

3.2.5 Tokiphy AI Tools

The Tokiphy AI Tools are an upcoming service anticipated to be launched later this year. These tools will seamlessly integrate AI art generation capabilities, empowering creators and artists to produce their artwork directly within Tokiphy Studio based on prompts.

The Tokiphy Creator simplifies the process of refining text, known as "prompt engineering," by enabling users to make adjustments through the conversational interface. This innovative tool has the potential to democratize the creation of sophisticated AI artwork, further enhancing our comprehensive all-in-one Tokiphy Creator Suite.

3.2.6 Tokiphy Mint Service

The Tokiphy Mint Service provides NFT token minting within the Tokiphy Studio Solution. These tokens can be directly transferred or dropped onto Tokiphy Cards, allowing for distribution through physical products at live events or shipping them to customers. For Tokiphy Gift-Card and Custom Card customers, we offer default minting and token contracts. Paid Tokiphy Studio customers, on the other hand, have the opportunity to have their own dedicated token contract, allowing for further customization of collection details such as name, description, symbol, project link, animation URLs, and properties. The metadata is stored in a decentralized manner using IPFS, and the ownership of the minting contract is

assigned to the customer's preferred wallet address. Paid customers fully own their minting contract and have complete control over the metadata.

To empower customers in creating dynamic NFT solutions, the metadata can also be stored in the cloud, enabling seamless updates and enhancements.

Our platform offers support for three blockchain networks: Ethereum, Polygon, and BSC. When it comes to token generation, we utilize the ERC-1155 token standard, providing the flexibility to choose between fungible and non-fungible tokens. Additionally, our system allows you to set maximum supply and burnable options, ensuring complete control over your token creation process.

Our minting and token contracts are built upon certified and validated templates, adhering to the EIP-712 standard of meta transactions. This simplifies token transactions for end-users, eliminating the requirement of funding their wallets with native blockchain tokens to initiate further token transfers back to their private wallets. This streamlined process enhances the generation of NFTs and facilitates token distribution.

To enhance the overall user experience, we provide convenient prepaid options for gas tank and gas fees. By pre-funding the Tokiphy Card with gas credits, you can offer your customers a seamless and exceptional user experience. No blockchain wallet is required to start minting your own NFTs with the Tokiphy Studio Solution.

#Learn more about gas-fees and meta transactions.

(<https://docs.tokiphy.com/tokiphy-wallet/gas-fees>)

Interested in giving it a go? Acquire one of our personalized gift cards and start minting your NFTs instantly.

(<https://www.shop.tokiphy.com/product-page/tokiphy-gift-card-you000>)

Depending on the Tokiphy Studio Tier you're subscribed to, a certain number of mint credits per month are included. Additional mint credits can be purchased on demand if needed. Please note that mint credits do not cover gas fees. Refer to the information below for more details on gas fees.

3.2.6 Tokiphy Gas Credits

In order to carry out any action on a blockchain, like executing smart contracts, purchasing tokens or NFTs, or conducting token transactions, additional computational power is required to accomplish the task. The cost of gas fees varies depending on the current network demand and may unexpectedly fluctuate during usage.

When utilizing the Tokiphy Wallet or Tokiphy Minting service, users are responsible for covering gas fees associated with NFT token asset transactions and minting contracts or token generation. To simplify the process, specific Tokiphy Cards offer prepaid credits for gas fees. Additionally, while using Tokiphy Studio, pre-paid gas credits are utilized to cover the costs of creating minting contracts and minting NFT tokens.

The Tokiphy Studio Tier you subscribe to determines the allocation of monthly gas credits. If necessary, you can purchase additional gas credits on demand.

3.2.7 Tokiphy Credits

Tokiphy Credits are internal credits that can be easily purchased whenever needed to cover the costs of additional services. These credits are equivalent to the euro currency on a 1:1 basis, meaning that one Tokiphy Credit is equal to one (1) Euro.

3.2.7 Tokiphy Validator Service

To utilize the Tokiphy Validator solution, customers must subscribe to the Tokiphy Validator service, which offers different tiers tailored to their specific needs. The service can be enabled for varying durations, ranging from one month to longer periods. Validator credits are utilized to pay for individual validations. The available tiers provide multiple validator credits and effectively cater to the desired use-cases of validations.

If needed, you can purchase additional validator credits whenever required.

The Tokiphy Validator service is currently a component of the Tokiphy Studio solution, but there are plans to potentially offer it as a standalone solution later this year. This would allow for the separation of the Tokiphy Studio Service from the Tokiphy Validator Service.

Please also take a moment to explore our comprehensive documentation available at docs.tokiphy.com for more detailed information.

3.3 Artist, Brand and web3 project Collaboration

Discover the array of services offered by Tokiphy and witness the mutual benefits it brings to both you and your customers. With Tokiphy's blockchain solution, usability is simplified while maintaining utmost security. The Tokiphy ecosystem encompasses hardware, such as Blockchain ID Cards, NFC chips, and Card-Reader Devices, as well as services like the Tokiphy Wallet, NFT Viewer, Transactions, Studio, and Validator. This comprehensive platform empowers digital creators,

artists, brands, and agencies, enabling them to deliver a truly transformative customer experience.

Tokiphy equips you with the essential creative tools needed to effortlessly craft and mint digital collectibles. Our mission is singular: placing you and your customers at the heart of everything we do. Together, let's shape narratives and embark on purpose-driven journeys, fostering a new culture within our community.

While Blockchain technology plays a crucial role in our operations, we view it primarily as an enabler rather than the sole focus. In the world of marketing, the customer lifetime value has become a key determinant relevant, brands and artists must establish a presence in virtual spaces. However, there is an emerging trend, especially in the wake of the pandemic, for a blending of virtual and In-real-life events. At Tokiphy, our goal is to assist creators in strategically positioning their brands to nurture and expand their fanbase and community. We aim to transform customers into "Fansumers", creating a space where partners and sponsors can easily tap into this dedicated audience.

Benefits of the Tokiphy Studio Solution:

3.3.1 Minting Service with Custom Smart Contract

Currently, many artists rely on the popular NFT marketplace OpenSea for minting their NFTs. Although OpenSea offers an easy-to-use interface for minting, it requires using a shared NFT smart contract. This limits artistic freedom and dependence on OpenSea's restricted conditions. In some cases, artists resort to third-party tools or private links for minting, which comes with high risks like fake listings and phishing attempts.

At Tokiphy, we offer a different approach. This empowers you with the freedom to include and transfer various forms of metadata such as video, audio, social connections, and internet sites. Say goodbye to limitations and embrace limitless possibilities!

3.3.2 Minting and Blockchain Compatibility

We proudly support Ethereum, Polygon, and Binance Smart Chain, making us EVM-compatible. Our adherence to ERC-1155 standards ensures seamless integration with blockchain ecosystems.

3.3.3 Creator Tools - AI-Powered Design

Unleash your creativity with our cutting-edge AI tools for customization and creation. Design unique digital collectibles, add a personal touch to your creations, and stay up-to-date with the latest trends. You can even utilize our tools to design branded cards tailored to your specific needs. Customization has never been easier!

Create any content you desire! Keep in mind, even your card can effortlessly transform into a valuable digital collectible itself. Our platform supports not only digital collectibles but also NFT tickets, certificates, and a wide range of content.

Experience the Tokiphy difference today!

3.3.4 Distribution Channels

Discover the exclusive Artist Collaboration initiative offered by Tokiphy!

Our platform provides artists with a simplified method to distribute their NFT art while engaging with customers in real life (IRL). By bridging the gap between the digital and physical realms, we enhance the user experience and broaden the reach of artists' creations.

Here's what you need to know:

For Artists

- Create captivating artwork as a digital twin, then generate and mint it as unique NFTs.
- Pre-drop your NFTs on the blockchain wallet of the Tokiphy Card.
- Finally, sell or distribute the physical Tokiphy Card, which carries the NFT art within it.

For Users

- Register the Tokiphy Card on our platform and claim its wallet.
- You'll have the option to transfer the NFT back to your personal wallet or keep it as a collectible piece of digital art.

Sales

Utilize our vibrant Tokiphy marketplace to sell your NFT art. Alternatively, place an order for a batch of cards and sell or distribute them independently.

Start now

Begin your journey with a single Tokiphy Card. Design and upload your artwork, and witness it come to life on the front of a high-quality physical card. Then, transform your creation into an NFT artwork and effortlessly integrate it with the card.

Already craving more? Upgrade to a Tokiphy Studio Tier subscription and unlock a collection of Tokiphy Custom Cards, allowing you to instantly bring your art series to life.

- Enjoy a free listing on the Tokiphy marketplace. Application required.
- A small percentage fee is charged only when the NFT gift card or NFT is sold on our platform.
- If you sell the card in-person through your own distribution, no additional fees are charged.

Join us on this remarkable journey as we transform digital tokens into tangible art forms! Experience the magic and provide artists with a new avenue to distribute and monetize their work. Together, let's bridge the gap between the virtual and physical world.

Get to dive into the world of Tokiphy, where wallets, drops, cards, chips, and APIs open up a whole new level of usability and security for users. With our preassigned Tokiphy default wallets--including Ethereum, Polygon, and Binance Smart Chain, with more exciting chains to come--users can claim ownership and effortlessly connect their existing wallets like Metamask or Wallet Connect.

But it doesn't stop there! Tokiphy brings blockchain to the masses, making it unbelievably easy to onboard customers who are new to the technology. Artists can drop NFTs, digital collectibles, certificates, or even event tickets on our cards, instantly benefiting the user and creating a whole new interactive experience.

And let's not forget about our amazing Tokiphy NFC chips! These little powerhouses can be embedded into valuable objects, and yes, even fashion garments. Say hello to a new era of phygitals, where verifying the authenticity of both virtual and physical items takes customer experience to a whole new level. We create a digital twin like nothing you've ever seen before.

As a validation platform, Tokiphy offers APIs for creators to build upon our cutting-edge technology. But here's the truly exciting part: you can organize your very own community gatherings! Tokiphy opens the door to exclusive token-gated commerce and ticketing, providing an easy and secure entry point for your

customers. Imagine creating unique customer experiences, complete with engagement tools, gamification, and perks along the entire journey.

Hold on tight, because the magic gets even better. As a Tokiphy token holder, you gain access to exclusive membership circles and events. Picture this: you're an artist and a gallerist. You organize a Vernissage at your gallery, but only token holders have the privilege to attend. Tokiphy gives you the freedom to organize the event while providing a secure, fast, and simple verification system. Show your card, get scanned in a blink, and immerse yourself in the experience. And with our upcoming wall readers, you can stabilize points of interest, claim proof of attendance (with benefits for future events), and even win free drinks, food, or a meet and greet with the artist. The possibilities are endless!

But wait, there's more! Collaborate with other artists, caterers, and brands related to art and culture. Our multipass cards allow you to start your own loyalty program, offering NFT painting vouchers for each milestone along the artist's journey. The more engaged users are, the more incredible benefits they unlock, while fostering deeper connections with you and your partners.

Welcome to a whole new realm of customer engagement and unforgettable experiences.

Welcome to Tokiphy.

For additional assistance and information, we encourage you to reach out to our marketing or engineering team. They will be more than happy to schedule a personalized video session for a detailed exploration of the Tokiphy Ecosystem.
